

Ballast Regulator Attachment

Mitchell Ballast Regulator Attachments for Backhoe Loaders and Hydraulic Excavators are used to regulate the ballast on railroad ties and track shoulders. The ballast elements are durable hard rubber elements that are the same elements used in product ballast regulators that are easily replaceable.

Ballast Regulator - Model MB - 50

Model MB-50, 50 inch wide Ballast Regulator for Backhoe Loaders quick hitches to the backhoe and can go down the center of the track, be positioned over each rail or pivot over the track shoulder.

Ballast Regulator - Model MB -103 S60

Model MB-103 S60, 103 inch wide Ballast Regulator for Hydraulic Excavators equipped with a Tilt Rotator covers the full width of the track.
